New KWI 200 Solid State Integrated Power Amp.

The KWI 200 represents the Integration of Simplicity, Purity, Elegance and Power. Available with optional Phono (MM/MC) and DAC (24/192 Asynchronous USB and RCA), offers freedom from the physical space requirements of complex audio separates. The KWI 200 requires only power cord, speaker cables and speakers, to make a True High End Audio system.

Manual controls are simple: Two knobs and two buttons. Power, Home Theater Bypass (or preamp-input) button, source select, and volume control knobs complete the interface.

Power handling is MOSFET by design, with a 1.5KVA power transformer and over 234,000 microfarads total capacitance. Incredible current reserves and 200W of power into 8 ohms (400W into 4 ohms), allow the flexibility to drive nearly any speaker.

Simple, pure, elegant and powerful. Power. Integrated.

The KWI 200 is proudly handcrafted in the U.S.A.
